13. Revision History

1. Overview

NovaDesk Version 3.2 introduces significant improvements focused on usability, security, automation, reporting, and system performance.

This release incorporates customer feedback collected during the previous six months and includes enhancements requested by enterprise customers.

The update is fully backward compatible with Version 3.1.

Customers are encouraged to review these release notes before upgrading production environments.

2. Release Summary

Release Version:

3.2

Release Date:

15 January 2026

Release Type:

Minor Feature Release

Highlights include:

- Dashboard redesign
- Enhanced Workflow Automation
- Improved SLA monitoring
- Advanced reporting filters
- Multi-Factor Authentication enhancements
- Improved API performance
- Security improvements
- Bug fixes

Estimated upgrade duration:

30–45 minutes

No database schema migration is required.

3. New Features

Dashboard Redesign

The Home Dashboard has been redesigned to improve usability.

New capabilities include:

- Configurable dashboard widgets
 - Drag-and-drop widget arrangement
 - Quick Action shortcuts
 - Improved KPI cards
 - Responsive layout improvements
-

Advanced Workflow Automation

Workflow automation now supports:

- Multiple trigger conditions
- Nested approval workflows
- Time-based automation
- Conditional branching
- Automatic escalation

Administrators can configure workflows without custom scripting.

Enhanced Reporting

Reporting now supports:

- Multi-level filtering
 - Saved report templates
 - Scheduled report delivery
 - Excel export improvements
 - Executive dashboard enhancements
-

Knowledge Base Improvements

Knowledge articles now support:

- Version history

- Rich image support
 - PDF attachments
 - Related article suggestions
 - Improved search relevance
-

API Rate Monitoring

Administrators can now monitor:

- API request volume
- Rate limit usage
- Failed requests
- Response latency

A new API Analytics dashboard has been introduced.

4. Enhancements

The following existing features have been improved.

Ticket Management

Enhancements include:

- Faster ticket loading
 - Bulk ticket updates
 - Improved attachment preview
 - Simplified ticket search
 - Enhanced filtering options
-

Asset Management

Asset module improvements include:

- Warranty reminders
 - QR Code support
 - Bulk asset import
 - Improved maintenance history
-

Notifications

Notification improvements include:

- Better email formatting
 - Microsoft Teams integration
 - Improved push notification reliability
 - Notification grouping
-

Search

Global Search improvements:

- Faster indexing
 - Improved relevance ranking
 - Synonym support
 - Search suggestions
 - Category filtering
-

5. Security Improvements

Security enhancements include:

- Stronger password validation
- Expanded Multi-Factor Authentication support
- Improved session management
- Enhanced audit logging
- Improved role-based access validation

Administrative sessions now expire automatically after **15 minutes** of inactivity.

Standard user sessions continue to expire after **30 minutes**.

Authentication Improvements

New authentication capabilities include:

- Hardware security key support
- Recovery codes
- Improved password reset verification

- Device recognition
-

6. Performance Improvements

Engineering optimizations have significantly improved application responsiveness.

Average improvements:

Operation	Improvement
Dashboard Loading	35% Faster
Ticket Search	42% Faster
Report Generation	28% Faster
API Response Time	30% Faster
Asset Lookup	40% Faster

Performance testing was conducted using enterprise datasets containing more than **1 million tickets**.

7. Bug Fixes

The following issues have been resolved.

Ticket Management

- Fixed duplicate ticket notifications.
 - Corrected ticket sorting inconsistencies.
 - Resolved attachment upload timeout.
 - Fixed incorrect SLA countdown display.
-

Dashboard

- Corrected widget refresh issue.
 - Fixed layout rendering on smaller displays.
 - Improved browser compatibility.
-

Reporting

- Fixed CSV export formatting.
- Corrected scheduled report delivery failures.

- Resolved missing totals in executive reports.

Knowledge Base

- Fixed broken internal links.
- Corrected article version display.
- Improved PDF preview reliability.

User Interface

Resolved:

- Alignment issues
- Font rendering inconsistencies
- Incorrect icon spacing
- Dark theme display defects

8. Known Issues

The following issues remain under investigation.

Issue	Workaround
Large report exports may take additional time	Export during off-peak hours
Very large attachments upload slowly on low-bandwidth connections	Compress files before upload
Dashboard widgets refresh after browser sleep	Refresh the browser manually

These issues are scheduled for resolution in Version 3.3.

9. Deprecated Features

The following features have been deprecated.

- Legacy Dashboard Layout
- Classic Ticket Search
- Internet Explorer support
- Legacy Email Notification Templates

Deprecated features remain available during the current release but will be removed in a future major version.

Customers are encouraged to migrate to the new functionality.

10. Upgrade Instructions

Before upgrading:

1. Notify users of the maintenance window.
2. Back up application data.
3. Verify database health.
4. Verify available storage.
5. Review custom integrations.

Upgrade Procedure:

1. Download Version 3.2.
2. Verify installation package integrity.
3. Install application update.
4. Restart application services.
5. Validate functionality.
6. Confirm user authentication.
7. Review application logs.

Estimated downtime:

30–45 minutes

11. Compatibility

NovaDesk Version 3.2 supports:

Operating Systems:

- Windows Server 2022
- Ubuntu 22.04 LTS
- Red Hat Enterprise Linux 9

Databases:

- PostgreSQL 15+
- Microsoft SQL Server 2022

Browsers:

- Google Chrome
- Microsoft Edge
- Mozilla Firefox
- Apple Safari

API Compatibility:

Version 3.2 maintains backward compatibility with REST API Version 3.

12. Frequently Asked Questions

Q1. Is Version 3.2 compatible with Version 3.1 databases?

Yes.

No database schema migration is required.

Q2. How long does the upgrade take?

The estimated upgrade time is **30–45 minutes**.

Q3. Was Multi-Factor Authentication improved?

Yes.

Version 3.2 introduces hardware security key support, recovery codes, and enhanced password reset verification.

Q4. Does this release require API changes?

No.

REST API Version 3 remains fully supported.

Q5. Which dashboard improvements were introduced?

The dashboard now supports configurable widgets, drag-and-drop layouts, Quick Actions, improved KPI cards, and a responsive design.

Q6. What is the biggest performance improvement?

Ticket Search performance has improved by approximately **42%**.

Q7. Is Internet Explorer still supported?

No.

Internet Explorer has been deprecated and is no longer supported.

Q8. When will the known issues be resolved?

The listed known issues are planned for resolution in **Version 3.3**.

13. Revision History

Version	Date	Description
3.0	August 2025	Major Platform Release
3.1	October 2025	Workflow and Dashboard Enhancements
3.2	January 2026	Performance, Security, Reporting, and UI Improvements
